**MARICOPA ASSOCIATION OF GOVERNMENTS
RESIDENT POPULATION ESTIMATES DOCUMENTATION
FOR JULY 1, 2007 ESTIMATES**

INTRODUCTION

Executive Order 95-2 requires that official July 1 resident population estimates be prepared each year. The Arizona Department of Economic Security (DES) is responsible for preparing the State and county level estimates. While DES prepares resident population estimates for all the counties in the state, Executive Order 95-2 authorizes that Councils of Governments may prepare the municipality estimates using the county estimates as control totals.

Each year the Maricopa Association of Governments (MAG) prepares municipality resident population estimates using the Housing Unit Method. The estimates are prepared based on the corporate limits of the jurisdiction as of the date of the estimate.

The estimates are used for a variety of purposes. They are used to:

1. Distribute \$23 million dollars annually to cities and towns based on each city and town's share of the population of all incorporated areas in the State.
2. Calculate expenditure limitations for cities and towns. This is done annually by the Arizona Department of Revenue.
3. Assist in preparing city, town and county budgets
4. Gauge growth in each jurisdiction
5. Establish a base for DES's socioeconomic projections

What follows is detailed documentation on: the process that MAG uses to collect and verify data, review and apply the estimates method, and conduct quality control checks. This documentation report discusses the general process MAG uses to prepare the estimates, but is specifically geared to the preparation of the 2007 resident population estimates. Definitions of estimates terms used in this document are contained in Appendix Nine.

DATA COLLECTION AND VERIFICATION

To apply the Housing Unit Method for developing MAG resident population estimates, MAG obtained data on annexed housing units, population in group quarters and residential completions. The process by which the data are collected, reviewed and verified is described in the following sections.

Annexations

Where municipalities annex land, any housing units in existence at the time the annexation takes place need to be added to the municipalities' housing stock. Prior to 2005, DES supplied summary annexation data to MAG. Since 2005, MAG has collected the data directly from member agencies.

MAG staff formally requests the annexations of member agencies in April and July, but collects annexations on a continual basis as the information becomes available. Some jurisdictions automatically forward to MAG a copy of each annexation ordinance upon adoption. Others provide MAG, on request, with adopted ordinances and associated documentation.

MAG draws on information in the adopted ordinance to provide a map of the annexed area, the ordinance number and/or annexation identifier, and the date the ordinance was adopted. Because adopted ordinances do not take effect until thirty days after the date of adoption, the annexations that MAG provided DES with annexations that were adopted in June 2007 for use in computing the July 1, 2008 resident population estimate. Annexation ordinances that were adopted in June 2007 were provided to DES, but it was noted that they would not take effect until July 2007 and should be credited to the July 1, 2008 resident population estimates.

MAG also requests that jurisdictions provide an estimate of the number of housing units in the annexed area at the time the annexation takes effect, and a letter to document the method used to prepare the estimate. The methods used to determine the number of housing units in the annexed area include field checks and a review of aerial photos.

MAG checks the list of annexations supplied by member agencies against other sources of data to identify any annexations that may have inadvertently been omitted. In particular MAG:

1. Obtains a boundary coverage from Maricopa County staff and generates a map and associated table that identifies all the annexations undertaken during a specific time interval. The table also identifies the date upon which the annexation became effective. Please see Appendix One for an example of the county map.
2. Compares the list of annexations on the Maricopa County boundary coverage with the annexations on the Maricopa County Recorder's Office website and the records of the local jurisdiction. This process identifies: annexations which have been submitted to the Maricopa County Recorder's Office, but have not been digitized; annexations that have been digitized, but have not been identified on the Maricopa County Recorder's website; and annexations adopted by a local jurisdiction that may not have been received by Maricopa County. MAG staff communicates with staff of local jurisdictions and/or Maricopa County to reconcile any inconsistencies among the three lists of annexations.
3. Examines the jurisdiction's Boundary and Annexation Survey submittal to the Census Bureau. For the July 1, 2007 estimates it would be the 2007 Boundary and Annexation Survey.

Where a jurisdiction annexes a group quarters, DES requires a letter from the management of the group quarters be provided to document the number of residents.

MAG provides DES with annexation data twice during the year in accordance with the DES data collection schedule. For the 2007 DES Annexation Mailing 1, MAG provided annexation data from July 1, 2006 through March 31, 2007 in the beginning of May 2007. For the 2007 DES Annexation Mailing 2, MAG provided annexation data from April 1, 2007 through June 30, 2007 on August 15, 2007. Appendix Two contains an example of the annexation documentation form for Phoenix that was provided to DES.

Group Quarters

The Housing Unit Method was used to derive a population in households by municipality. To determine a total resident population, it was necessary to add population in group quarters.

In accordance with DES requirements, MAG requested that member agencies provide information on population in group quarters along with any associated documentation. If there is a change in population in group quarters from the previous year, the following is requested as documentation:

1. Where the population is 300 or greater and any change in population has occurred from the previous year, a letter from a management official at the group quarters.
2. Where the population is between 75 and 299 and an absolute change of more than 33 percent in population has occurred from the previous year, a letter from a management official at the group quarters.
3. Where the population is between 75 and 299 and the absolute change is less than 33 percent, the local jurisdiction may verify the change in population using the letter format provided by DES.
4. Where the population is less than 75 and any change in population has occurred from the previous year, the local jurisdiction may verify the change in population using the letter format provided by DES.

MAG uses the DES required format for the submittal and documentation of changes to population in group quarters. The population in group quarters is provided by four institutional group quarter categories and six non-institutional group quarter categories as identified in Appendix Three. Where the population in group quarters increases, the population in group quarters is updated for each category.

Because the 2005 Census Survey did not disaggregate the population in group quarters by the institutional and non-institutional categories, MAG was unable to identify the total population by these categories for 2007. However any increases in the population in group quarters or new group quarters since the Census Survey is assigned to the DES categories.

For college dormitories a population in group quarters is requested as of May 1st of the estimate year. This is done to ensure that students residing in the dormitories have not departed for summer vacation. For all other group quarters, the population is requested as of the end of June.

Where the population in group quarters increases, DES requires documentation of the change either from a management official, or if the change is less than 75 residents by a letter from the local jurisdiction verifying the change. For a new group quarters a letter from a management official is required regardless of the size of the population in the group quarter. Sample letter formats documenting the change in population in group quarters have been developed by MAG and are contained in Appendix Three.

MAG provided to DES the group quarters data collected on August 15, 2007 in accordance with the agency's deadline for supplying changes to group quarter population. The group quarter submittal for the City of Surprise for the July 1, 2007 estimates is included in Appendix Three. Surprise provided an update to its 2005 Census Survey and 2006 estimate of population in group quarters.

Residential Completions

An important distinction needs to be made between a residential permit issued and a residential permit completion for tracking the addition of new housing units to the housing stock. A residential permit issued signifies that authorization has been provided to begin construction of a housing unit. A residential permit completion, on the other hand, is based on a certificate of occupancy and indicates that a unit has been constructed and is ready for occupancy.

In 1989, MAG contracted with consultants from the University of Arizona to evaluate the MAG estimates process. The consultants recommended that MAG use residential completions instead of residential permits issued. The consultants also noted that the use of residential completions is more accurate because it avoids the need to make assumptions regarding the lag time between the issuance of a permit and the construction of the associated housing unit. It also avoids the need to make an assumption regarding the number of residential permits issued that did not result in the construction of a housing unit. MAG implemented the consultant recommendation and has been using residential completions to calculate municipality estimates since April 1, 1990.

Since 1990 MAG has been collecting residential completions by four unit types: single family, apartment, mobile home and town home. For estimates prepared from 1991 to 2005, residential unit completions were aggregated to the latest decennial or special census housing stock by unit type. Occupancy rates and persons per household by unit type were then applied to the housing stock by unit type to derive total population in households by unit type. This was done in order to capture the change in occupancy rates and persons per households which resulted from a change in the mix of housing unit types subsequent to the Census.

Because the 2005 Census survey did not provide the number of housing units by unit type, MAG used total housing units, occupancy rates and persons per household for computing the July 1, 2007 population estimates. However, MAG continues to collect residential completions by unit type to maintain consistency in its historical completions database and for analysis purposes. MAG will consider reinstating the calculation of population estimates by unit type subsequent to the release of Census 2010.

In order to ensure proper communication with municipality staff tracking new housing units built, MAG has requested that each MAG member agency designate a building permit contact person. These individuals are then used as the main contact for obtaining the needed data and verifying that the data collected are accurate.

MAG requests that member agencies provide MAG with residential completion data one month after the close of each quarter. This results in the following schedule:

Quarter ending September 30	November 1
Quarter ending December 31	February 1
Quarter ending March 31	May 1
Quarter ending June 30	August 1

MAG in turn supplies the residential completion information to DES twice a year in accordance with the following schedule:

- Completions for the 3rd and 4th quarters from the previous calendar year in April per the DES mailing calendar
- Completions for 1st and 2nd quarters of the current calendar year in July or August as per the DES mailing calendar.

For each member agency, MAG required the following information for each completed permit

- Permit completion date
- Permit number
- Permit issuance date
- Unit type (single family, apartment, mobile home, town home)
- Number of housing units
- Type of permit (new build, demolition, move)
- Address (street number, direction, name and suffix)
- Assessor Parcel Number

The following information requested for each permit completion is optional, but strongly recommended:

- Zip Code
- Census Code
- Value of residence
- Square feet
- Lot number
- Subdivision

Appendix Four shows the format of the data requested.

A member of the MAG staff is assigned to work with member agency contacts on the provision of residential completions. The staff member monitors member agency submittals and communicates

with contacts where necessary using the following procedure:

1. Fifteen days before the completions are due, a reminder e-mail is sent to contacts who have not yet provided the data. For example, on or about October 15, MAG staff would send an e-mail to building permit contacts indicating that the residential completions are due by November 1. The e-mail is worded as follows:

“This is a reminder that the residential completion data for the 3rd quarter of < year> which you compile for the Maricopa Association of Governments is due on November 1, <year> .

Residential completions are very important data which will help ensure the accuracy of our population updates and projections. Our annual population updates are used for many purposes including the distribution of approximately \$23 million in lottery funds annually, the computation of municipal per capita water use targets and to set expenditure limitations.

We appreciate receiving this data within 30 days of the end of the quarter. If you have already submitted data for this quarter, please disregard this reminder. Feel free to contact me with any questions.”

2. Fifteen days after the deadline, another e-mail is sent to contacts that have not provided the data noting that the deadline has passed and data are again requested. The MAG Population Technical Advisory Committee (POPTAC) member is also copied on this e-mail. If the data are not received within a short period of time, the MAG staff person telephones the member agency representative to remind him/her that the data are due. An example of this e-mail is shown below.

“We have not received the residential completion data for the 3rd quarter of < year> which was due on November 1, <year>. To keep our database current we appreciate receiving completion data within 30 days of the end of a quarter.

Residential completions are very important data which will help ensure the accuracy of our population updates and projections. Our annual population updates are used for many purposes including the distribution of approximately \$23 million in lottery funds annually, the computation of municipal per capita water use targets and to set expenditure limitations.

Thank you for helping us compile this data. If you have any questions, please feel free to contact me.”

3. The format of the data is checked and modified in an Access database to conform to the standard database structure. If any of the required information is not provided, MAG requests the information again. Where these data are not provided, MAG may draw on alternative sources of information, if available, to derive the data. For example, if the jurisdiction does not provide units by unit type, the unit type can be derived from the Census

Code associated with the permit. However, at a minimum, MAG needs from the jurisdiction the completion date, the permit number, the number of units (if multi-family) by unit type and the address. If the data are provided in hard copy format, then MAG staff input the completion information. Data are also checked against previous quarters to check for duplicates.

4. The number of completions is summarized by unit type and an e-mail with the totals sent back to the building permit contact. The MAG POPTAC representative is copied on the e-mail. The contact is asked to verify the completion data supplied. An example of the e-mail is shown below.

“Thank you for the submittal of your residential completion data for the 3rd quarter of < year>. Using your submittal, we have added the following to our database from your jurisdiction for this quarter.

317	Single Family units
0	Townhouse/condo units
0	Apartment units
0	Mobile home units

We will assume that these numbers are accurate unless we hear otherwise from you within two weeks.

If you have any questions, please feel free to contact me.”

5. Where the contact person indicates that there are more completions than the number identified, MAG requires that the individual information for the missing completions be submitted. If the completions are provided, MAG staff checks their permit numbers against the existing database to make sure that there is no duplication of permits.
6. MAG modifies its database accordingly with any changes that are requested and verified.
7. For each completion MAG geocodes the address (assigns an x, y coordinate). This enables MAG to spatially identify where the new units are built. If possible, geocoding is done using the parcel number since this is spatially the most accurate. If the parcel number is not available, then the geocoding is done by street address. The final data are maintained in a GIS geodatabase format. The database is compiled in Access and distributed in a GIS format.
8. MAG adds a field (RECDATE) in the database that records the date the data was received from our member agencies. This date helps us to query records that have earlier completion dates, but may have been submitted at later times. For example, we may receive a record that has a 1st quarter 2007 completion date, but the data was received after the DES deadline and it may have a RECDATE from 4th quarter 2007. Using the two dates we can ensure that changes to the data are tracked and reported.

9. MAG compiles a table showing which member agencies have provided data and for which quarter. This is included as an attachment with the MAG POPTAC agenda in May, July, November and February during the year. This attachment also includes the net total permits by quarter. This makes POPTAC members aware of their jurisdiction's status and gives them another opportunity to verify the numbers. A table summarizing the net residential completions from 1990 through June 30, 2007 is included in Appendix Five. This table is updated annually.
10. MAG staff uses the same process for collecting, reviewing and verifying residential completion data each quarter of the year.
11. A month before the final DES deadline for submitting completions to DES, MAG staff begins to e-mail and communicate with building permit contacts and members of the MAG POPTAC that the deadline for supplying residential completions to MAG staff is approaching. It is also noted that if the data are not provided in a timely fashion, then the information will not be able to be incorporated into that year's population estimate. MAG specifies a final submittal date that allows MAG staff to assemble and summarize the completion data and supply it to DES in a desired format by its final deadline.
12. If the completions are still not provided two weeks before the deadline, the Intergovernmental Coordinator or Manager of a of a city/town/county may be contacted to make him/her aware that if the information is not provided, then the population estimate for their jurisdiction will not reflect the number of new units built during the past year. Completion information provided after the DES deadline, can be used to compute the following year's population estimate.
13. Once all the residential completion data are collected, they are submitted to DES using the required format. This format requires that MAG provide completions and demolitions separately along with annexed housing units by quarter for each jurisdiction. An additional column is used to identify completions submitted to MAG this fiscal year, but which took place in a previous fiscal year. Please see Appendix Six.

REVIEW AND APPLICATION OF METHOD TO BE USED

After the final deadlines pass for supplying information to DES, MAG POPTAC reviews the methods used by DES to prepare the county estimates and by MAG to produce the municipality estimates. This is done at the MAG POPTAC Ad Hoc Subcommittee meeting and in less detail at the full MAG POPTAC meeting. A presentation is given at the meeting that explained the estimates process.

Once the Maricopa County estimate is approved, MAG uses it to develop municipality estimates. The method used to develop the July 1, 2007 municipality estimates is noted as follows:

1. **Prepare Census Data**

Using the Census Survey as the base to determine the September 1, 2005 household population, group quarter population, total housing units, occupied housing units, occupancy rates and population per occupied unit for each jurisdiction.

2. Collect New Data

Obtain the residential housing unit completions and demolitions for the time period from September 2, 2005 through June 30, 2007 from the MAG member agencies.

Obtain annexed and de-annexed housing unit data from member agencies. Determine population change from annexations/de-annexations using persons per occupied housing units and occupancy rates.

Obtain July 1, 2007 group quarter population from survey of MAG member agencies.

3. Calculate July 1, 2007 Housing Units

Calculate the July 1, 2007 housing stock by municipality by adding the net new housing units and the net annexed housing units from step 2 to the Census base.

4. Calculate July 1, 2007 Resident Population

Calculate household population by multiplying the housing stock from step 3 by the respective occupancy rates and persons per occupied unit by municipality.

The occupancy rate and persons per occupied unit by municipality were taken from the 2005 Census Survey to calculate the new household population.

Bench the residential population in households to the county control total from DES to obtain July 1, 2007 population in households. Benching is necessary when the MAG derived total population does not match the control total obtained from DES. MAG benches its numbers by municipality by proportionately distributing the difference based on the change from the Census base population. The following formula is used to bench the household population derived by the HUM methodology to the control total provided by DES:

$$\text{Benchd Household Population by Municipality} = ((A / B) * C) + D$$

Where:

A = Change in municipality household population from 2005 Census Survey to 2007 HUM municipality household population.

B = Change in County household population from 2005 Census Survey to 2007 HUM County household population.

C = Difference in DES County Control total from 2005 Census Survey County total.

D = 2005 Census Survey Household Population by municipality.

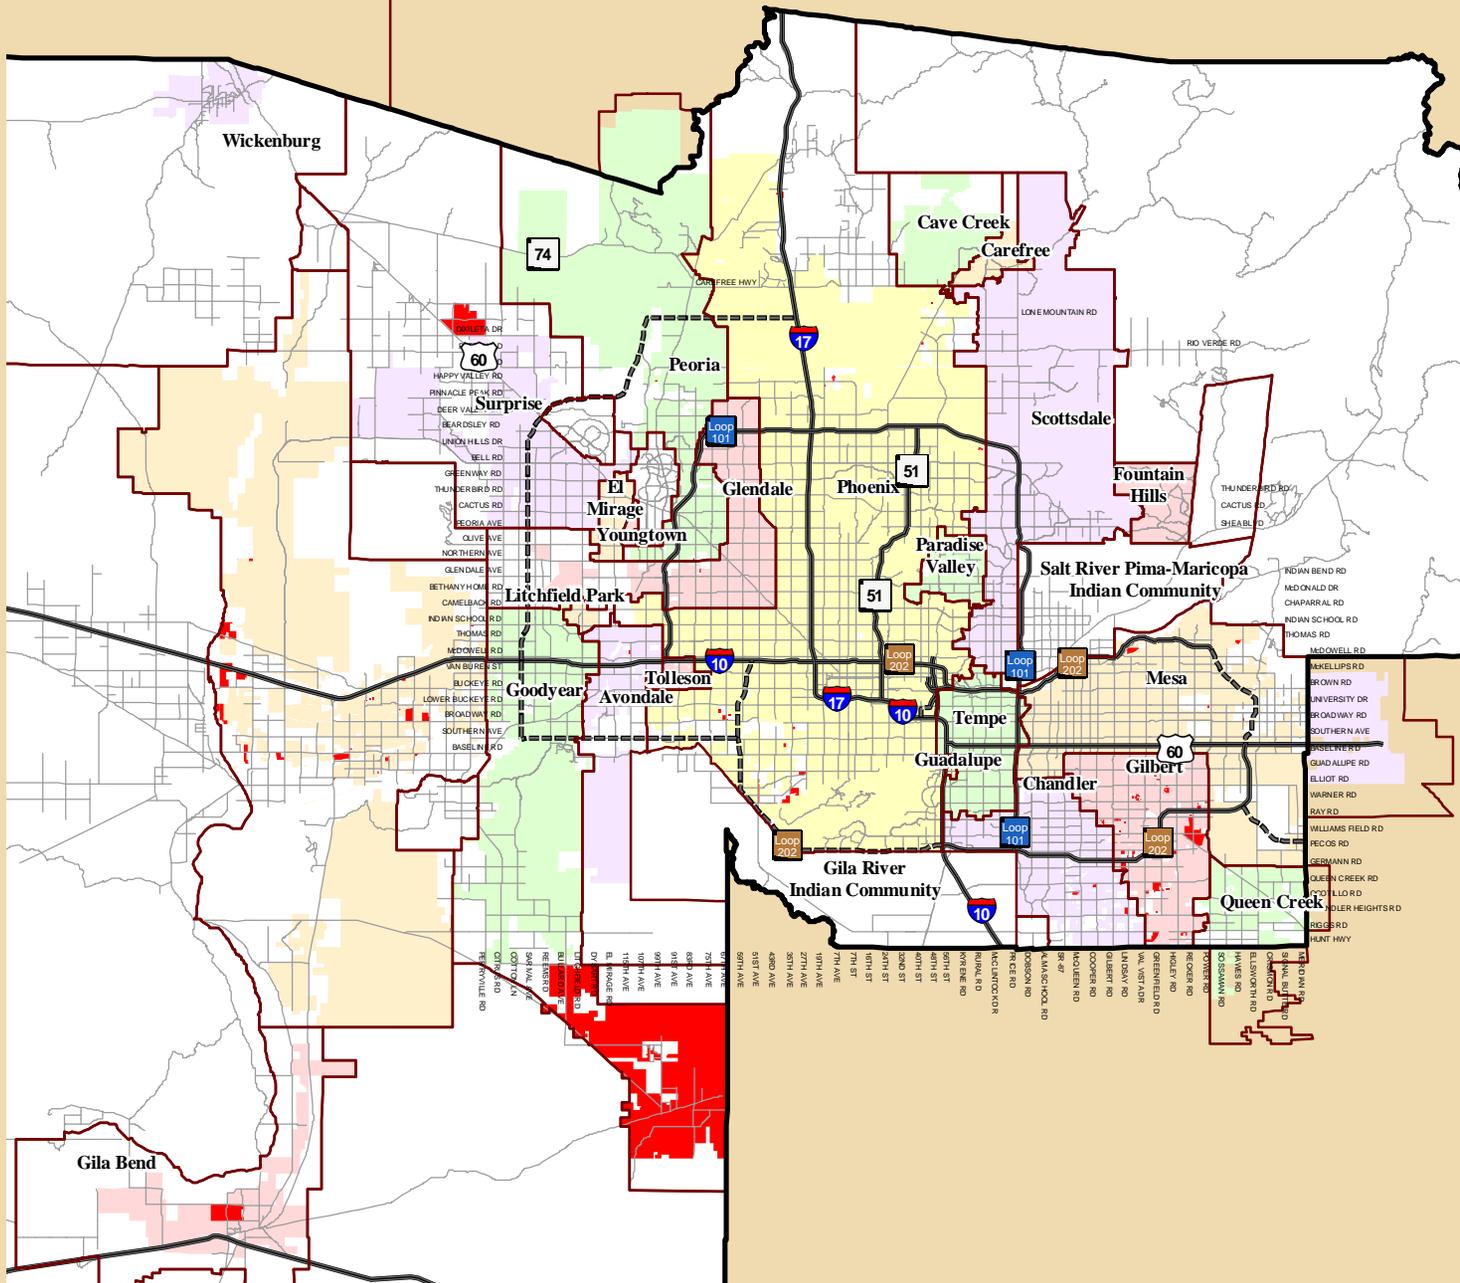

Calculate the total resident population for July 1, 2007 by adding the July 1, 2007 group quarter population from step 2 to the July 1 2007 household population.

Once the first draft set of estimates is developed, it is subjected to quality control tests to detect any anomalies and ensure reasonableness. These checks include, but are not limited to:

1. Conducting a cursory review of the current year estimates as well as a comparison with previous year estimates to identify any inconsistencies.
2. Examining the percent growth in the past year to detect any sudden inexplicable changes.
3. Checking the accuracy of the input data including housing unit completions, annexations and population in group quarters.
4. Making some manual calculations to corroborate the estimates tables.
5. Creating a table to provide the documentation underlying the MAG 2007 municipality population estimates. Please see Appendix Seven.
6. Reviewing and recommending approval of the draft estimates by three different committees before they are officially approved by MAG's policy body.

The final table of estimates that MAG provides to its committees for approval contains population for 24 cities and towns, three Indian Communities and the unincorporated portion of Maricopa County. Because DES is only required to produce population estimates for cities and towns, DES requests that MAG aggregate the population in Indian Communities into "Balance of County." The table in this format is transmitted to DES. Please see Appendix Eight.

 1789 West Jefferson - 045Z
 P.O. Box 6123
 Phoenix, Arizona 85005 - 1623

Dear Mr. Colon

Our facility, in conjunction with the City/Town/County of _____ is providing you with updated population numbers for our group quarters facility as noted in the table below

Facility Type: prison, college dorm, nursing home, group home, etc	
Facility management contact	
Title of management contact	
Facility phone number	
Year facility opened	
7/1/06 resident population (other than a new facility)	
7/1/07 resident population	
Change from 2006 to 2007	
Reason for change	

If you have any questions or need more information, please contact me.

Sincerely,

(signature of facility's management official)

(printed name of facility's management official)

SAMPLE LETTER 2 TO BE USED FOR POPULATION IN GROUP QUARTERS BETWEEN 75 AND 299 PEOPLE WITH A POPULATION INCREASE SINCE 2006 OF LESS THAN 33 PERCENT; AND FOR A CHANGE IN POPULATION OF GROUP QUARTERS OF LESS THAN 75 PEOPLE.

July xx 2007

Samuel Colon
State Demographer for Estimates
Arizona Department of Economic Security
1789 West Jefferson - 045Z
P.O. Box 6123
Phoenix, Arizona 85005 - 1623

Dear Mr. Colon

I ----- certify that I have contacted the following Group Quarters institutions and the data provided by them is to the best of my knowledge true and correct. I am certifying the data for the following institutions:

Institution name	
Institution type	
Year facility opened	
Institution contact	
Contract title	
Institution phone number	
7/1/06 resident population	
7/1/07 resident population	
Change from 7/1/06	
Reason for change	

Repeat above for each Group Quarters where there is a change.

If you have any questions or need additional information, please contact me at xxx-xxx-xxxx

Sincerely,

xxx

Appendix Nine

Estimates Terms and Definitions

Annexation

A legal action take by a City or Town to expand its corporate limits.

Annexed Housing Units

Housing units that are in place at the time land is annexed.

Census

A complete enumeration, usually of a population, but also of businesses and commercial establishments, farms, governments, and so forth.

Census (decennial)

The census of population and housing, taken by the Census Bureau in years ending in 0 (zero). Article I of the Constitution requires that a census be taken every ten years for the purpose of reapportioning the U.S. House of Representatives.

Group Quarters

A group quarters is a place where people live or stay other than the usual house, apartment, or mobile home. Two general types of group quarters are recognized: institutional (for example, nursing homes, mental hospitals or wards, hospitals or wards for chronically ill patients, hospices, and prison wards) and noninstitutional (for example, college or university dormitories, military barracks, group homes, shelters, missions, and flophouses). Group quarters may have housing units on the premises for staff or guests.

Housing unit

A house, an apartment, a mobile home or trailer, a group of rooms, or a single room occupied as separate living quarters, or if vacant, intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants live separately from any other individuals in the building and which have direct access from outside the building or through a common hall. For vacant units, the criteria of separateness and direct access are applied to the intended occupants whenever possible.

Household

A household includes all the people who occupy a housing unit as their usual place of residence.

Occupancy Rate

The number of occupied housing units divided by the total number of housing units in a geographical area.

Occupied housing unit

A housing unit is classified as occupied if it is the usual place of residence of the person or group of people living in it at the time of enumeration.

Persons per occupied housing unit

The number of persons living in occupied housing units divided by the total number of occupied housing units.

Resident population

Resident population of the United States includes persons resident in the 50 States and the District of Columbia. It excludes residents of the Commonwealth of Puerto Rico, and residents of the island areas under United States sovereignty or jurisdiction (principally American Samoa, Guam, Virgin Islands of the United States, and the Commonwealth of the Northern Mariana Islands). A resident of a specific area for Census 2000 is defined as a person "usually resident" in that area. Resident population excludes the United States Armed Forces overseas, as well as civilian United States citizens whose usual place of residence is outside the United States.

Residential Completions

The construction associated with a residential building permit has been completed and the housing unit is ready for occupancy.

Residential Demolitions

A housing unit that has been demolished. Certificates of demolition are issued to signify that a housing unit has been demolished.

Vacant housing unit

A housing unit is vacant if no one is living in it at the time of enumeration, unless its occupants are only temporarily absent. Units temporarily occupied at the time of enumeration entirely by people who have a usual residence elsewhere are also classified as vacant
